1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S.

Patent No. 5,357,767 to Roberts. Roberts discloses the claimed invention, including the discharge velocity of the second air stream SC or TC being 1.4 times greater than the discharge velocity of the first air stream PC.

3. Applicant's arguments filed August 3, 2006 have been fully considered but they are not persuasive. Roberts discloses that the primary air curtain PC can have a velocity in the range of 200-250 fpm. See column 9, lines 60-65. The secondary air curtain SC can have a velocity in the range of 250-300 fpm. See column 10, lines 8-11. Finally, the third air curtain TC is disclosed as having a velocity of about 300 fpm. Column 10, lines 12-13. Using just those velocities, and picking from random, say the air curtain PC is the equivalent of the claimed first air stream and the air curtain SC is the equivalent of the claimed second air stream, if the air curtain PC has a velocity of 200 fpm and the air curtain SC has a velocity of 280 fpm, the ratio of those two velocities is 1.4, which reads on the claimed ratio. On the other hand, if the air curtain PC has a velocity of 214 fpm and the air curtain TC has a velocity of 300 fpm, again the ratio of those two velocities is 1.4. So Roberts does indeed fully anticipate claim 1.
